HDBLAST · continuous coordinate shell source checkpoint

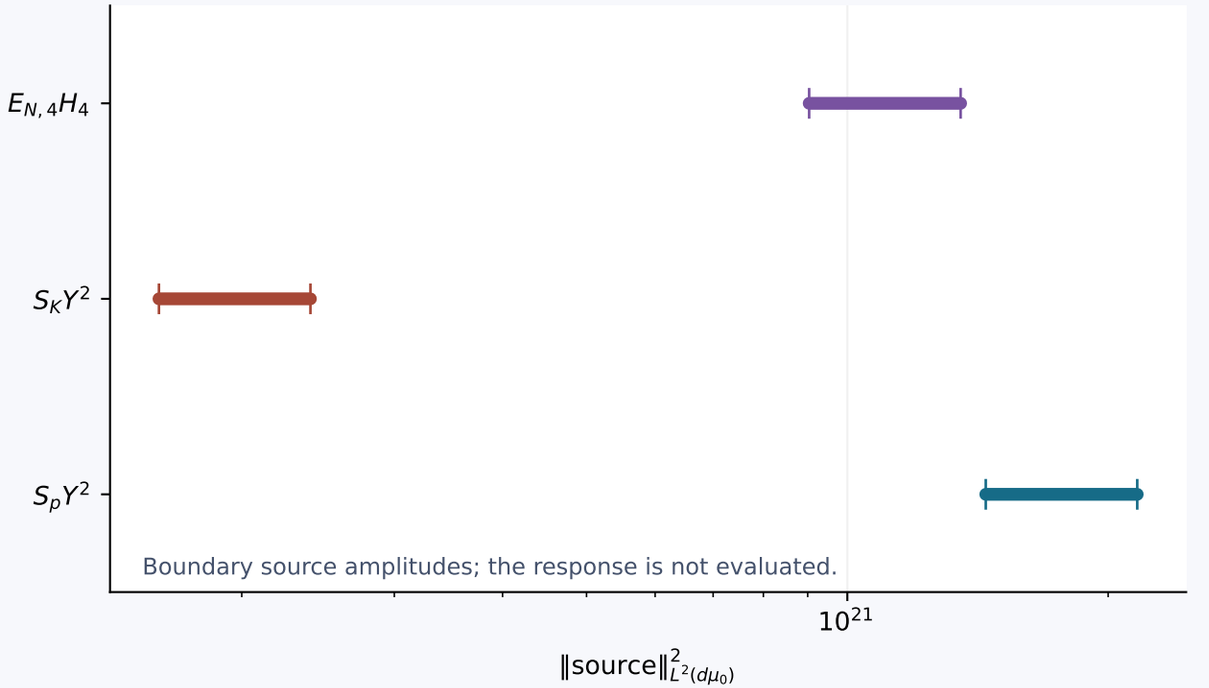

Actual first metric boundary trace

Proper-time derivative enclosure

Squared source norms, registered model units

Coordinate source signs in the central bracket

Certified location	S_p	S_K
At left endpoint A	negative	positive
At a scalar zero $x_* \in (A, B)$	positive	negative
At right endpoint B	negative	positive
Throughout tail $2 \le x \le 3$	negative	positive

$A = 1.49998, \quad B = 1.49999$

Continuity gives at least two distinct zeros of each coefficient in (A,B).

The signs depend on the retained coordinate representative.
They do not determine a force, energy or second-order response.
