

Matched stress and current at the twelve registered points

—●— Removed-cutoff logarithmic / matched stress route
 ◇ Independent direct modes, K=256

Shading: exact source support $-5 < \eta < -3$. Lines guide the eye; open and filled markers nearly coincide.
 First-order perturbations about the fixed BD baseline: $\delta \rho = \epsilon R / a^4$, $\delta p = \epsilon P / a^4$, $\delta j = \epsilon J / a^2$; $\epsilon = 10^{-4}$. No heating or stability inference.
